PROFILE

Third-year Information Technology undergraduate passionate about Full-Stack Development, Cloud Computing, AI-assisted engineering, and scalable web applications. Experienced in building MERN stack applications, AWS serverless systems, REST APIs, and AI-powered solutions with strong problem-solving skills and hands-on experience using modern development workflows and deployment platforms.

EDUCATION

Shah and Anchor Kutchhi Engineering College

Btech in Information Technology

Mumbai, India

2023 – 2027

PROJECTS

Money Matrix – Expense Management Platform | *MERN Stack, REST APIs, Vercel*

- Developed a full-stack expense management platform to manage income, expenses, and financial analytics
- Built responsive frontend interfaces using React.js and integrated scalable backend services using Node.js and Express.js
- Designed RESTful APIs and implemented MongoDB database integration for efficient transaction management
- Implemented dashboard analytics, real-time transaction updates, and responsive UI optimization
- Deployed the application on Vercel with cloud-based hosting and production-ready deployment workflow
- GitHub Repository

Cloud-Based Job Portal | *React.js, AWS Cognito, S3, DynamoDB, IAM*

- Built a scalable serverless job portal enabling users to register, upload resumes, browse jobs, and apply online
- Designed cloud-native architecture using AWS managed services eliminating traditional backend infrastructure
- Integrated Amazon S3 for secure resume storage with user-specific access permissions
- Used DynamoDB for fast and scalable storage of user profiles and job applications
- Implemented IAM-based access control and authentication workflows using AWS Cognito

Hospital Review Sentiment Analysis | *Python, NLP, ALBERT, Streamlit*

- Developed an AI-powered sentiment analysis system to classify hospital reviews into Positive, Negative, and Neutral categories
- Used ALBERT transformer architecture and advanced NLP preprocessing techniques for contextual text understanding
- Built an interactive Streamlit application for real-time prediction and user interaction
- Implemented tokenization, embedding generation, and model inference workflows using Scikit-learn and NLP libraries

Student Management System | *Java, Docker, Jenkins, SonarQube, GitHub*

- Developed a modular student management system for maintaining academic and student records
- Integrated GitHub for collaborative version control and CI/CD development workflow
- Used SonarQube for static code analysis, bug detection, and code quality improvement
- Automated build and deployment processes using Jenkins and Docker containers
- GitHub Repository

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, C, HTML, CSS

Frontend Development: React.js, Next.js, Responsive UI Design

Backend Development: Node.js, Express.js, REST APIs

Database Technologies: MongoDB, DynamoDB, SQL

Cloud & Deployment: AWS, Vercel, Serverless Architecture

Developer Tools: Git, GitHub, Docker, Jenkins, SonarQube, Figma

AI Tools: ChatGPT, GitHub Copilot, Cursor, Claude

CERTIFICATIONS

AWS Academy Graduate: Cloud Foundations
Google Android Developer Virtual Internship – AICTE
AICTE Google AI-ML Virtual Internship
GEN AI Powered Data Analytics – Tata
Complete Guide in HTML, CSS and JavaScript – Udemy
